Meblobud is a family business established 19 years ago with the aim of designing and manufacturing unique furniture. We produce custom furniture based on customer specifications as well as on our own design, it can be a single piece of furniture as well as a full suit. Our company makes and installs a whole range of furniture, including not only kitchens, bathroom cabinets and built-in wardrobes, but also office, shop, hotel and bar furniture.

Kitchen furniture

Meblobud employs 10 workers and has its own production plant with fully up-to-date machinery. Materials used range from wood, laminate panels, MDF, up to veneers made of domestic wood such as oak, cherry and walnut as well as of exotic ones from Asia, Africa and Americas. At last, but not least, we use architectural concrete to manufacture countertops, window sills, floor tiles, wall panels, shower cubicles and of course furniture.

At our veneer workshop, we take special care to select and match veneer sheets according to our experience and customer's needs. Our paint shop allows us to offer the possibility to carry out the most incredible designs. Usually, a transparent lacquer is applied to protect the surface and to enhance the wood's natural beauty. However, we can also apply on our furniture NCS lacquers or even car paints in order to add a metallic shine. We pay particular attention to shape and texture: modern CNC machinery provides the ability for us to solve the most complicated and difficult projects. Our clients often entrust us with projects signed by well-known architects and designers.
